

Automate your toner replenishment process

Improve logistics and reduce costs

Data Direct in collaboration with Purpose Software, has announced the immediate availability of extension modules that enable users of the CBS and 2serv systems to integrate with Data Direct's outsourced toner replenishment services.

This integration automates and speeds up the whole toner replenishment process whilst enabling resellers to benefit from Data Direct's greater buying power to reduce the cost of toner, both OEM and compatibles.

How does it work?

- Customer calls to order toner
- A toner drop call is logged to the system
- Purchased Order is automatically raised and sent electronically to Data Direct.
- Data Direct picks and dispatches the order direct to the end user customer in white wrapping (branded service available)
- Acknowledgement is sent by Data Direct confirming order dispatched.
- Data Direct sends invoice electronically which is automatically posted and matched in 2serv or CBS for payment for payment authorisation.
- Data Direct also provides online and telephone-based support for any technical issues that end users may have with installing replacement toner cartridges.

Benefits to CBS & 2serv users:

- Eliminates the need to maintain costly stocks of toner for all the print devices you sell and support
- Reduces postage cost and toner received by end user customer faster (99% next day delivery)
- Lower toner costs through Data Direct's greater buying power
- Reduces overall costs, errors and administration
- Improves cash flows and frees up credit lines so less dependence on other types of stock financing
- Eliminates service issues when users install replacement toner
- Allows picking and delivery staff to be deployed to more productive areas
- Enables office/warehouse space to be reclaimed and repurposed
